

Authorization for Final Safety Approval

EHSS-Phos Program – Hazardous Work – Safe Work Permit, Appendix F

Facility Managers and Department Directors shall designate individuals under their control who are authorized to provide Final Safety Approval per the matrix.

This document is to be completed and signed by personnel who have been designated to provide Final Safety Approval for Mosaic permits above their official position/level.

Approving work permits requires the ability to assess potential risks of the work being performed. The permit is a tool to assist in identifying and mitigating potential risks. By being an authorized permit approver, I agree to assess this risk for each and every permit that I am asked to approve. I confirm that I understand my approval authority for approving permits, in both hierarchy and scope. I also understand that I may be called upon to approve permits outside of my main work area, and that I can and will defer approving a permit if I am in doubt as to properly assessing the potential hazards.
